hair removal

considering
laser hair removal?

Unwanted hair is a common problem for both women and men and is often a source of embarrassment and loss of confidence. Laser Hair Removal is the most effective solution available for this unwanted hair.

Since only light is used it is non-invasive and does not cause the irritations typically found with some other hair removal methods.

me clinic
the difference

Our 30 years of experience ensures you receive **personalised** service and the right advice.

We offer you choices as our dermal clinicians provide a **tailored solution** for your requirements.

Our clinicians listen to you and your requirements to help you decide which treatment is **right for you** after a full review and medical assessment.

hair removal

how does it work?

The laser beam is absorbed by the pigment (melanin) in the hair causing the energy to travel down the hair shaft to the root, where it retards hair growth or eliminates the root of the hair.

Those with darker hair and fairer skin are the easiest to treat, due to the fact that darker hair absorbs the laser light more readily than lighter colours. However, our latest generation Laser technology means that people with lighter hair can also achieve excellent results.

treatment & expectations

As Lasers treat hair in the hair's growing phase, it usually takes between four to eight sessions with approximately four weeks to six weeks in between each treatment. In some instances hair could be growing as a result of a medical condition and we can also treat and assist with this problem.

Following Laser Hair Removal some redness in the treated area is considered normal, but will subside in a day or so.

areas that can be treated?

- Upper Lip
- Chin
- Legs
- Bikini line
- Underarms

- Arms
- Neck
- Shoulders
- Stomach
- Navel

- Beard
- Lower legs
- Thighs
- Brazilian
- Back
